

MuniLogic Hardware Specifications

MuniLogic is a browser based program. The program performs server-side processing which translates into more demand for the file server and less for the workstation.

File Server:

The file server should be either a dedicated server or a server with a low demand load. If running with other programs, the lower the demand, the faster the program will function.

Recommended Requirements are as Follows:

Processor:	Pentium 4 Based
Memory:	4 GB RAM
Storage:	20 GB Storage

The following are not required by the customer, but will be installed on the server by MuniLogic.

- Microsoft .NET Framework 2.0 and 3.0
- Microsoft ASP.NET 2.0 AJAX Extensions 1.0
- SQL Server 2005 Express Edition
- SQL Server Agent
- Crystal Reports 10, Service Pack 1

Workstation:

Recommended Requirements are as Follows:

Processor:	Pentium 4 Based
Memory:	1 GB RAM
Storage:	100 MB Storage
LAN Connection:	100 Mbps

Broadband Internet:

Since our mapping program is a hosted application, a broadband Internet connection will be required. Recommended speed is 1.5 Mbps. (DSL, Cable, T1, and Frame Relay are all sufficient)
